

Databunker PRO

Databunker PRO is a self-hosted, GDPR compliant secure vault for customer records. The product solves the following challenges: privacy by design, data minimization, user audit, Schrems II compliance, privacy-compliant logging, data subject request automation, and many more.

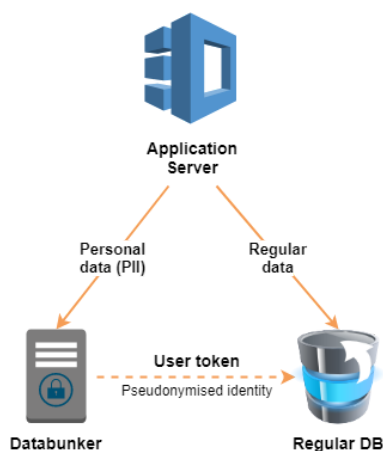

Databunker PRO is a professional version of a Databunker - an open-source security vault built by the same development team (<https://databunker.org/>).

Why Databunker PRO?

1. Quick and easy integration.
2. Instant personal data reports.
3. Reduction in IT security and costs.
4. Optional self-service management for end-users.
5. Built-in Data Privacy Officer (DPO) management portal.

Product highlights:

1. Durable multi-tenancy using the industry's best secure architecture.
2. On-demand database performance boost with AWS Aurora PostgreSQL Auto-Scaling feature.
3. Frictionless integration using REST and GraphQL APIs, built-in Node.js support.
4. Better connectivity. The product comes with built-in connectors for popular cloud SaaS and Databases vendors. HubSpot, MailChimp, Salesforce, MySQL, PostgreSQL, Oracle, SQL Server and many more systems are supported. Personal data reports generated now with a click of a mouse.
5. Schedule-based automatic personal data removal or anonymization in compliance with GDPR and CPRA data minimization requirements.
